KF PLASMA TIMES | KF NEWS  Sorry, I have not yet presented myself. I am Giuseppe Lanotte, factory manager of the Keshe Foundation Italy which today represents an international reference point for the development of new scientific knowledge, technologies and solutions to the main global problems such as famine, lack of water, lack of electricity, climate change and diseases. Before joining the Foundation, I have always promised to myself that I wanted to do something big and essential for humanity to payback the miracle I have received. I never thought I could be so deeply involved in something that really is changing the history. When I first came into the foundation for obvious reasons in 2016, I immediately felt a sense of love and welcomed from Mr. Keshe, Caroline and the rest of the team who patiently taught me how to take the first steps. I was never treated and never felt like a normal employee, but part of a big family going to the same direction. One thing that mostly left me speechless is that Mr Keshe, prefers to have lunch break with his team without creating the wall between employee and employer. All these aspects contribute to making the workplace positive and increasing productivity, with beneficial consequences for the whole team. **“After recovering from an 8 months coma caused by a bad car accident, I finally understood the meaning of my existence.”** In the hot summer of 2017, I was put at the helm of this spaceship flanked by Giovanni Lapadula and Raffaele Patella and since then, we never stopped thinking, solving, studying, and producing what is best for humanity most of which concern our health which I think it is the most urgent sector to solve on the planet. Everyday we imagine, we think of people, and we devolop the ideas that seem best and combine plasma technology with daily use products such as: Plasma Eye and Migraine Masks, Plasma Insoles, Plasma T-Shirts, Plasma Hand Soap, the Magrav Alkalizer and Energizer, and soon we will also offer new solutions in the organic and vegan sector like shampoo and gel sanitizing which will join the historical and timeless Pain Pen and Pain Pad. As initially implied, this is not about selling products and waiting for a compensation, but it is about changing the life of humanity, the world, and its history, and this gratifies us. Entering people's homes changing the fields around the enviroment with our products and knowing that who is using them is recieving benefits is for us the best compensation ever. This technology, is great even now that is  still at the beginning and we can only imagine what will come next considering that this technology represents a radical development for broad-spectrum well-being and that the interlocutor to whom we address is always the same: **The whole world.**  by Giuseppe Lanotte Keshe Foundation Manufacturing Italy WWW.KESHEFOUNDATION.ORG 03	
I finally understood the meaning of my existence	J’ai finalement compris la signification de mon existence
“After recovering from an 8 months coma caused by a bad car accident, I finally understood the meaning of my existence”	**« Après ma guérison d’un coma de 8 mois dû à un grave accident de voiture, j’ai finalement compris la signification de mon existence. »**
Sorry, I have not yet presented myself. I am Giuseppe Lanotte, factory manager of the Keshe Foundation Italy where today represents an international reference point for the development of new scientific knowledge, technologies and solutions to the main global problems such as famine, lack of water, lack of electricity, climate change and diseases.	Désolé, je ne me suis pas encore présenté. Je suis Giuseppe Lanotte, directeur de l’usine italienne de la Keshe Foundation. Aujourd’hui je représente une référence internationale pour le développement du nouveau savoir scientifique, des technologies et des solutions aux principaux problèmes mondiaux (la famine, le manque d’eau, le manque d’électricité et les maladies).
Before joining the Foundation, I have always promised to myself that i wanted to do something big and essential for humanity to payback the miracle I have received. I never thought I could be so deeply involved in something that really is changing the history.	Avant la Foundation, je m’étais toujours promis de faire quelque chose de grand et d’essentiel pour l’humanité pour rendre le miracle que j’ai reçu. Je n’avais jamais pensé pouvoir m’investir si profondément dans quelque chose qui est en train de vraiment changer l’histoire.

When I first came into the foundation for obvious reasons in 2016, I immediately felt a sense of love and welcomed from Mr. Keshe, Caroline and the rest of the team who patiently taught me how to take the first steps.	Pour ma première fois à la Foundation dû à d'évidentes raisons en 2016, j'ai immédiatement senti un sentiment d'amour et de bienvenue de Mr Keshe, de Caroline et du reste de l'équipe qui m'ont patiemment enseigné comment débuter.
I was never treated and never felt like a normal employee, but part of a big family going to the same direction.	Je ne me suis jamais senti et n'ai jamais été traité tel un employé, mais comme un membre d'une grande famille allant dans la même direction.
One thing that mostly left me speechless is that Mr. Keshe, prefers to have lunch break with his team without creating the wall between employee and employer. All these aspects contribute to making the workplace positive and increasing productivity, with beneficial consequences for the whole team.	Une chose qui m'a surtout laissé sans voix est que Mr Keshe préfère prendre sa pause déjeuner avec son équipe sans créer de séparation entre les employés-ées et l'employeur. Tous ces aspects contribuent à créer un lieu de travail positif et améliore la productivité, avec des conséquences bénéfiques pour la totalité de l'équipe.
In the hot summer of 2017, I was put at the helm of this spaceship flanked by Giovanni Lapadula and Raffaele Patella and since then, we never stopped thinking, solving, studying, and producing what is best for humanity most of which concern our health which I think it is the most urgent sector to solve on the planet.	Durant le chaud été 2017, j'ai été nommé à la tête de cet ovni avec Giovanni Lapadula et Raffaele Patella. Depuis lors, nous n'avons jamais arrêté de penser, de résoudre, d'étudier et de produire le meilleur pour l'humanité, surtout en ce qui concerne la santé, ce qui est selon moi, le domaine le plus urgent à traiter sur la planète.
Every day we imagine, we think of people, and we develop the ideas that seems best and combine plasma technology with daily use products such as: Plasma Eye and Migraine Masks, Plasma Insoles, Plasma T-Shirts, Plasma Hand Soap, the Magrav Alkalizer and Energizer, and soon we will also offer new solutions in the organic and vegan sector like shampoo and gel sanitizing which will join the historical and timeless Pain Pen and Pain Pad.	Chaque jour, nous imaginons en pensant aux autres et développons ce qui semble le meilleur, pour l'associer à la plasma technology dans des produits du quotidien : Plasma Eye and Migraine Masks, Plasma Insoles, Plasma T-Shirts, Plasma Hand Soap, the Magrav Alkalizer and Energizer. Bientôt, nous offrirons de nouvelles solutions vegan et organique : des shampooings et du gel désinfectant, qui rejoindront les historiques et intemporels Pain Pen et Pain Pad.
As initially implied, this is not about selling products and waiting for a compensation, but it is about changing the life of humanity, the world, and its history, and this gratifies us. Entering people's homes changing the fields around the environment with our products and knowing that who is using them is receiving benefits is for us the best compensation ever.	Comme prévu, le but n'est pas de vendre des produits pour en vivre, mais est de changer la vie de l'humanité, le monde et son histoire. Cela nous remplit de gratitude. Entrer dans la maison de chacun par la modification des champs avec nos produits et savoir que ceux qui les utilisent en reçoivent les bénéfices est la plus belle rémunération qui soit pour nous.
This technology, is great even now that is	Cette technologie est formidable même si,
still at the beginning and we can only imagine what will come next considering that this technology represents a radical development for broad-spectrum well-being and that the interlocutor to whom we address is always the	à l'heure actuelle, elle n'en est encore qu'à ses débuts et que nous ne pouvons qu'imaginer ce qu'elle deviendra au regard du fait qu'elle représente un changement radical pour un bien-être global et que son interlocuteur est toujours

KF PLASMA TIMES | KF NEWS

UPDATES FROM ARIZONA

by Jon Bliven

In Arizona it seems like the pace of activity has sped up. With each passing day our testing and understandings are stretched further. We have so many spinning reactors going at our factory that if you did not know what we are doing one might think we were nuts. Our belief in the technology and the work of the foundation keeps us moving continually forward. We have had a primary focus on trying different ways to capture or hold on to a neutron and then have that neutron interface with the reactors to open up the plasma field. This is how we are working to create a spaceship.

In addition to creating the free neutron we have been doing many experiments to create the crystallization structure with various GANS. This is where the salt-water environment is important in that much like a small cell the GANS can begin a growth of a crystal structure. Even within this structure of the various GANS, there are many forms crystal structures can take place and we hope in the future we can understand this better. The crystal structure even in the Nano state allows for the creator to infuse the material with a memory.

We must remember that the water can carry a memory also. We have created a carbon GANS with a crystaline structure and we have learned that this will be very useful with tomorrow's future communications. In the **231th knowledge seekers workshop (https://youtu.be/rxJpG60itow)** starting around 57 minutes we talk about the work we are doing. A little further along Mehran T. Keshe states:

"This goes back to understanding the structure of the amino acids, where we talk about the carbon, hydrogen, nitrogen, and oxygen where oxygen is the gravitational field holding things together, where hydrogen is the energy supplier, nitrogen is bringing of the whole structure to be able to transfer, and carbon is the link of the connections between all the elements. So if you go back in understanding this and understanding that if you have, as you said the amino acid or the amino acid of the physicality of the man added to this process then existence and the presence of the carbon crystals is part of the communication lines between the captain and the man who controls and the energy production. The existence of these crystals initially and from the beginning was set out for this effect. [...] Carbon crystals is the current connection between the cells. [...] It is the remote-control connection and it is instantaneous. [...] These carbon crystals in the plasma condition are [...] part of your Zero-time communication.

We also started looking into water purification devices using plasma balls to structure the memory of the water as well as purify the waters. We used plasma balls configured in a double starship configuration to restructure and energize the water. Preliminary testing looks encouraging, but we still have a way to go. See video here of our test model **https://youtu.be/xD1f-88lJv4** and a second where we increase the surface tension of the water to allow a copper wire to float on the top of the water. **https://youtu.be/tAnWHBOXF_A**

It is interesting to note that all our gans that we created also has this surface tension to float a small wire. This helps validate the addition and benefits of adding CO2 gans water to assist river water.

When the surface tension of the water is increased the water can allow the healing energies of the sun and the atmosphere to oxygenate the water and the memory of the water helps assist other molecules in the river to also change.

We know that there are many ways coming forward with the technology to correct many challenges facing our world. It is our hope that we can best use the technology to create the best solutions that will be of the biggest benefit for all. The spaceship will open many doors and we continue to actively pursue a solution.

In Arizona it seems like the pace of activity has sped up. With each passing day our testing and understandings are stretched further. UPDATES FROM ARIZONA **by Jon Bliven**	**NOUVELLES DE L'ARIZONA** **par Jon Bliven**
In Arizona it seems like the pace of activity has sped up. With each passing day our testing and understandings are stretched further. We have so many spinning reactors going at our factory that if you did not know what we are doing one might think we were nuts. Our belief in the technology and the work of the foundation keeps us moving continually forward. We have had a primary focus on trying different ways to capture or hold on to a neutron and then have that neutron interface with the reactors to open up the plasma field. This is how we are working to create a spaceship.	En Arizona, l'activité s'accélère. Chaque jour, nos tests et nos compréhensions sont poussés plus loin. Nous fabriquons tant de réacteurs tournants via notre usine que si vous ignorez notre activité, vous diriez que nous sommes fous. Notre foi en la technologie et le travail de la foundation nous fait avancer continuellement. Nous nous sommes d'abord fixés comme objectif de capturer ou de conserver un neutron de différentes façons, pour interfacer ensuite ce neutron et les réacteurs et ouvrir le plasma field. C'est ainsi que nous travaillons à la création du spaceship.
In addition to creating the free neutron we have been doing many experiments to create the crystallization structure with various GANS. This is where the salt-water environment is important in that much like a small cell the GANS can begin a	En plus de créer le neutron libre, nous avons fait de nombreuses expériences pour créer divers GANS cristallins. C'est là que le milieu de l'eau salée prend son importance car, tout comme une petite cellule, les GANS peuvent commencer leur

growth of a crystal structure. Even within this structure of the various GANS, there are many forms crystal structures can take place and we hope in the future we can understand this better. The crystal structure even in the Nano state allows for the creator to infuse the material with a memory.	croissance par une structure cristalline. Et même, dans cette structure de différents GANS, plusieurs formes de structures cristallines sont à même de se créer. Nous espérons mieux comprendre cela dans le futur. La structure cristalline, même à l'état Nano, permet à son créateur d'imprégner le matériel d'une mémoire.
We must remember that the water also can carry a memory also. We have created a carbon GANS with a crystalline structure and we have learned that this will be very useful with tomorrow's future communications. In the 231th knowledge seekers workshop https://youtu.be/rxJpG60itow starting around 57 minutes we talk about the work we are doing. A little further along Mehran T. Keshe states:	Rappelons-nous que l'eau elle-même a la capacité de mémoire. Nous avons créé un GANS Carbone à structure cristalline, ce qui sera très utile pour les futurs systèmes de communication. Vers la 57ème minute du 231th Knowledge Seekers Workshop https://youtu.be/rxJpG60itow, nous exposons le travail que nous faisons. Un petit peu plus loin, Mehran T. Keshe déclare :
"This goes back to understanding the structure of the amino acids, where we talk about the carbon, hydrogen, nitrogen, and oxygen where oxygen is the gravitational field holding things together, where hydrogen is the energy supplier, nitrogen is bringing of the whole structure to be able to transfer, and carbon is the link of the connections between all the elements. So if you go back in understanding this and understanding that if you have, as you said the amino acid or the amino acid of the physicality of the man added to this process then existence and the presence of the carbon crystals is part of the communication lines between the captain and the man who controls and the energy production. The existence of these crystals initially and from the beginning was set out for this effect. …. Carbon crystals is the current connection between the cells. … It is the remote-control connection and it is instantaneous. …. These carbon crystals in the plasma condition are…. part of your Zero-time communication.	**« Cela revient à comprendre la structure des acides aminés, avec le carbone, l'hydrogène, le nitrogène et l'oxygène. L'oxygène est le champ gravitationnel, il lie les choses ensemble, l'hydrogène est le fournisseur d'énergie, le nitrogène apporte la capacité de transfert à toute la structure et le carbone est le lien de connexion entre tous les éléments. Partant de ceci et si vous avez, comme vous l'avez dit les acides aminés ou ceux de la physicalité de l'Homme ajoutés à ce processus, alors le carbone sous forme de cristal est une partie des lignes de communication entre le capitaine et l'Homme qui contrôle et la production d'énergie. Ces cristaux existent, depuis le début, à cet effet. […] Le carbone sous forme de cristal est l'actuelle connexion entre les cellules. […] C'est la connexion de contrôle à distance et c'est instantané. […] Ces cristaux de carbone en condition plasma sont […] une partie de la communication en temps réel.**

	
We also started looking into water purification devices using plasma balls to structure the memory of the water as well as purify the waters. We used plasma balls configured in a double starship configuration to restructure and energize the water. Preliminary testing looks encouraging, but we still have a way to go. See video here of our test model https://youtu.be/xD1f-88lJv4 and a second where we increase the surface tension of the water to allow a copper wire to float on the top of the water. https://youtu.be/tAnWHBOXF_A	Nous avons aussi commencé à étudier des appareils de purification de l'eau. Ils utilisent des plasma balls afin de la purifier tout en structurant sa mémoire. Elles sont positionnées en configuration double du spaceship pour la restructurer et l'énergiser. Il y a encore à approfondir bien que les tests semblent encourageants. Premier modèle de test https://youtu.be/xD1f-88lJv4 Second modèle de test avec augmentation de la tension de surface de l'eau pour qu'un fil de cuivre flotte https://youtu.be/tAnWHBOXF_A
It is interesting to note that all our GANS that we created also has this surface tension to float a small wire. This helps validate the addition and benefits of adding CO_2 GANS water to assist river water.	Fait intéressant : tous les GANS créés ainsi ont cette tension de surface nécessaire au flottement d'un petit fil. L'ajout de GANS de CO_2 dans l'eau des rivières est donc un bénéfice et un avantage validés.
When the surface tension of the water is increased the water can allow the healing energies of the sun and the atmosphere to oxygenate the water and the memory of the water helps assist other molecules in the river to also change.	Quand la tension de surface de l'eau est augmentée, l'eau peut permettre aux énergies de guérison du soleil et de l'atmosphère d'oxygéner l'eau et la mémoire de l'eau aide à permettre aux autres molécules de la rivière de changer également.
We know that there are many ways coming forward with the technology to correct many challenges facing our world. It is our hope that we can best use the technology to create the best solutions that will be of the biggest benefit for all. The spaceship will open many doors and we continue to actively pursue a solution.	Nous savons qu'il y a de nombreuses manières d'avancer avec cette technologie pour remporter les nombreux défis de notre monde. Notre espoir repose en une meilleure utilisation pour créer les meilleures solutions qui apporteront les plus grands bienfaits à tous. Le spaceship ouvrira de nombreuses portes et nous continuons à activement chercher des solutions.

END OF 2nd TRIMESTER
27th July 2018

A big THANK YOU to all you wonderful Knowledge Seekers around the World!

- We have come far – with many ups and downs.
- We achieved more awareness - to what global peace really means to us.
- We found love & friendship - towards each other and ourselves.
- We are on the road to discover our Souls and our connection to everything around us.
- We support and encourage each other in our studies and experiments.
- We realize that we are still learning: to accept each other, evolve our Souls and forgive mistakes.

THANK YOU to all beautiful students of the Keshe Foundation Spaceship Institue!

We can be proud of ourselves and all we have given during this last trimester, "like a single cell within an even bigger entity" we achieved so much:

- The numbers of students who became class teachers in different languages has increased.
- The numbers of active and acknowledged workshop teachers has increased.
- The distribution team is being looked after and been given advice beautifully.
- Dedicated transcribers and translators have given their time and love to spread the knowledge.
- Knowledge Seekers have been sharing their amazing experiences and testimonials.
- New students found their courage to speak and get involved in many tasks.
- Presentations to help Understanding Plasma Science were wonderfully created.
- Public & private classes were held every week by amazing teachers in: Bengali, English, French, German, Hungarian, Romanian, Polish and Spanish. Plus many other workshops took place in additional languages.
- Video presentations were beautifully created to deepen the understanding of knowledge.
- Hosting & co-hosting, weekly scheduling, background IT, management team, administration, public relationship, manufacturing and development projects have been working on improving a smoother flow.

"We are all here to serve" - it takes time to learn but we are successful at the end! So please use the semester break to let the seed of accquired knowledge sink in – and let it come to blossom in our next trimester.
We are the Keshe Foundation – let's add to it and see what this flower can grow into. Much love to everyone! See you in a bit!

Next trimester starts on:
SEPTEMBER 17th, 2018

END OF 2ND TRIMESTER **27th July 2018**	**FIN DU 2ÈME TRIMESTRE** **27 Juillet 2018**
A big **THANK YOU** to all you wonderful **Knowledge Seekers** around the World !	Un **GRAND MERCI** à tous les merveilleux **Knowledge Seekers** du monde entier !
• We have come far - with many ups and downs. • We achieved more awareness - to what global peace really means to us. • We found love & friendship - towards each other and ourselves. • We are on the road to discovering our Souls and our connection to everything around us. • We support and encourage each other in our studies & experiments. • We realize that we are still learning: to accept each other, evolve our Souls and forgive mistakes.	• Nous avons fait beaucoup de chemin - avec beaucoup de hauts et de bas. • Nous avons pris plus conscience - de ce que la paix mondiale signifie vraiment pour nous. • Nous avons trouvé l'amour & l'amitié - les uns envers les autres et envers nous-même. • Nous sommes sur la voie de la découverte de notre Âme et de notre connexion avec tout ce que nous entoure. • Nous nous soutenons et nous nous encourageons mutuellement dans nos études & expérimentations. • Nous nous rendons compte que nous

	sommes toujours en train d'apprendre : pour nous accepter mutuellement, faire évoluer nos Âmes et pardonner les erreurs.
THANK YOU to all beautiful students of the Keshe Foundation Spaceship Institute.	**MERCI à tous les magnifiques étudiants de la Keshe Foundation Spaceship Institute.**
We can be proud of ourselves and all we have given during this last trimester, "like a single cell within an even bigger entity" we achieved so much:	Nous pouvons être fier de nous et tous, nous avons donné pendant ce dernier trimestre, « comme une cellule unique d'un plus grand corps », nous avons accompli tant :
• The numbers of students who became class teachers in different languages has increased. • The numbers of active and acknowledged workshop teachers have increased. • The distribution team is being looked after and been given advise beautifully. • Dedicated transcribers & translators have given their time and love to spread the knowledge. • Knowledge Seekers have been sharing their amazing experiences and testimonials. • New students found their courage to speak and get involved in many tasks. • Presentations to help Understanding Plasma Science were wonderfully created. • Public & private classes were held every week by amazing teachers in: Bengali, English, French, German, Hungarian, Romanian, Polish and Spanish. Plus, many other workshops took place in additional languages. • Video presentations were beautifully created to deepen the understanding of knowledge. • Hosting & co-hosting, weekly scheduling, background IT, management team, administration, public relationship, manufacturing and development projects have been working on improving a smoother flow.	• Le nombre d'étudiants qui sont devenus enseignants quelque soit la langue a augmenté. • Le nombre d'enseignants de workshop reconnus et actifs a augmenté. • L'équipe de distribution est prise en charge et reçoit de merveilleux conseils. • Des transcripteurs et des traducteurs dédiés ont donné de leur temps et de leur amour pour propager la connaissance. • Les Knowledge Seekers ont partagé leurs incroyables expériences et témoignages. • Les nouveaux étudiants ont trouvé le courage de parler et de s'impliquer dans de nombreuses tâches. • Les présentations pour aider à la Compréhension de la Plasma Science ont été merveilleusement créées. • Les classes publiques & privées ont été tenues chaque semaine par des professeurs incroyables en langues : Bengali, Anglais, Français, Allemand, Hongrois, Roumain, Polonais et Espagnol. De plus, de nombreux autres workshops ont eu lieu dans d'autres langues. • Les présentations vidéos ont été magnifiquement créées pour approfondir la compréhension des connaissances. • L'hébergement & le co-hébergement, la planification hebdomadaire, l'informatique de base, l'équipe de gestion, l'administration, les relations

	publiques, les projets de fabrication et de développement ont travaillé sur l'amélioration d'un flux plus fluide.
"**We are all here to serve**" – it takes time to learn – but we are successful at the end! So please use the trimester break to let the seed of acquired knowledge sink in – and let it come to blossom in our next trimester.	**« Nous sommes tous là pour servir »** - il faut du temps pour apprendre - mais nous réussissons en fin de compte ! Alors, s'il vous plaît, utilisez la pause trimestrielle pour laisser la semence de la connaissance acquise germer - et qu'elle s'épanouisse dans notre prochain trimestre.
WE are the KESHE Foundation – let's add to it and see what this flower can grow into. Much love & light over to everyone! See you in a bit!	**NOUS sommes la KESHE Foundation** - laissons-la fleurir et voyons ce que cette fleur peut devenir. Beaucoup d'amour & de lumière sur vous tous ! À bientôt !
Next Trimester start: 2018/September/17th	Début du prochain trimestre : 17/09/2018

KF PLASMA TIMES

PLASMA BALL UNIT
IS NOW AVAILABLE

The development of Keshe Plasma devices and improvement of existing devices has resulted in many different plasma device types within the Keshe Foundation inventory. One of these devices is the Plasma Ball Unit (PBU). The PBU mainly consists of several spheres (balls), which are mounted on motors (dynamic systems) and therefore rotate at certain speeds. Inside the balls, different types of GANSes in different physical states (liquid, paste, dry powder) can be placed. A combination of different types of GANSes (field spectra) is used and concentrated in order to balance the fields and further the matter (e.g. from within the organs) of the body of a human being or an animal.

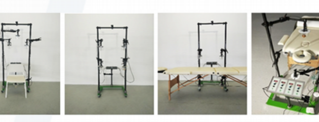

The Plasma Ball Unit is built out of high quality materials and can be utilized very flexibly. By the use of articulated arms, mounted on a castored* frame assembly, every shielded motor can be moved freely in all directions, therefore, a lot of formations can be applied in a way to include every part of the body, and create different types of concentrated fields (which formations were developed by Mehran Tavakoli Keshe and a number of well-known Knowledge Seekers). Materials used for the PBU are laser cut and powder coated stainless steel for the base-frame, on which are fixed three stainless steel sockets for the carbon fibre rods. On these vertical carbon fibre rods are mounted the articulated carbon fibre arms, which can be moved freely.

At one castored frame, maximum 8 articulated arms can be mounted, and two additional frames can be placed opposite each other, and be connected by 2.5m carbon fibre rods to move several articulated arms along a lying body. Furthermore, supplementary castored frames are available too, on which can be mounted articulated arms, as well as a controller for 8 motors.

The plasmatic fields inside the Plasma Ball Unit are well-known and frequently used as a basic environment for processing and further focusing on specific parts of the body of a human being or an animal. Furthermore, the created fields support heavily to connect with the soul of the people inside the unit and therefore gives a boost in processing for all people involved, therefore the unit can also be seen as a training unit for space technology. The way how to use the Plasma Ball Unit and protocols for specific cases can be developed in the medical teaching of the Keshe Foundation (to apply, write an email to doctors@keshefoundation.org).

The Plasma Ball Unit is CE certified Medical Type I and is delivered as a kit. Most of the components are pre-assembled; assembling the unit takes maximum 15 minutes. For further questions or tailor made solutions please contact the team of Keshe Foundation.

GLOSSARY
*Castored = provided with castor wheels
Castor wheel = A wheel that can pivot but is not intended to govern the driving direction

PLASMA BALL UNIT IS NOW AVAILABLE! CE Medical Device Class I	LA PLASMA BALL UNIT EST DÉSORMAIS DISPONIBLE ! (Unité à Balles Plasmatiques) CE Matériel Médical de Classe 1
The development of Keshe Plasma devices and improvement of existing devices has resulted in many different plasma device types within the Keshe Foundation inventory. One of these devices is the Plasma Ball Unit (PBU). The PBU mainly consists of several spheres (balls), which are mounted on motors (dynamic systems) and therefore rotate at certain speeds. Inside the balls, different types of GANSes in different physical states (liquid, paste, dry powder) can be placed. A combination of different types of GANSes (field spectra) is used and concentrated in order to balance the fields and further the matter (e.g. from within the organs) of the body of a human being or an animal.	Le développement des appareils à Plasma Keshe et l'amélioration de l'existant ont permis de créer plein d'appareils à plasma différents au sein de l'inventaire de la Keshe Foundation. L'un de ces appareils est la Plasma Ball Unit (PBU). Elle est principalement constituée de plusieurs sphères (balles), qui sont montées sur des moteurs (systèmes dynamiques) et qui tournent donc à certaines vitesses. À l'intérieur des balles, différents GANS dans différents états (liquide, pâte, poudre sèche). Une combinaison de GANS (spectre de champ) est utilisée et concentrée afin d'équilibrer les champs et d'agir sur la matière (par exemple, à l'intérieur des organes) du corps d'un être humain ou d'un animal.
The Plasma Ball Unit is built out of high quality materials and can be utilized very flexibly. By the use of articulated arms, mounted on a castored*	La PBU est composée de matériaux de haute qualité et est utilisable de manière très flexible. Avec ses bras articulés, montés sur une armature

frame assembly, every shielded motor can be moved freely in all directions, therefore, a lot of formations can be applied in a way to include every part of the body, and create different types of concentrated fields (which formations were developed by Mehran Tavakoli Keshe and a number of well-known Knowledge Seekers). Materials used for the PBU are laser cut and powder coated stainless steel for the base-frame, on which are fixed three stainless steel sockets for the carbon fiber rods. On these vertical carbon fiber rods are mounted the articulated carbon fiber arms, which can be moved freely.	à roues castor*, chaque moteur blindé peut être déplacé omni-directionnellement. Ainsi, beaucoup d'agencements sont possibles pour inclure chaque partie du corps et créer différents types de champs concentrés (agencements développés par Mehran Tavakoli Keshe et un certain nombre de Knowledge Seekers bien connus). Les éléments de la PBU sont faits d'acier inoxydable découpé au laser. Le cadre de base est recouvert de poudre et accueille les 3 supports en acier inoxydable des tiges verticales (fibre de carbone). Sur ces tiges verticales sont montés les bras articulés déplacables (fibre de carbone).
At one castored frame, maximum 8 articulated arms can be mounted, and two additional frames can be placed opposite each other, and be connected by 2.5m carbon fiber rods to move several articulated arms along a lying body. Furthermore, supplementary castored frames are available too, on which can be mounted articulated arms, as well as a controller for 8 motors.	Sur l'armature à roues castor, on peut monter au maximum 8 bras articulés. Deux armatures peuvent être placés en face l'une de l'autre et être reliées par des tiges en fibre de carbone de 2,5 m pour déplacer plusieurs bras articulés le long d'un corps allongé. De plus, des armatures supplémentaires sont également disponibles pour accueillir des bras articulés, ainsi qu'un contrôleur pour 8 moteurs.
The plasmatic fields inside the Plasma Ball Unit are well-known and frequently used	Les champs plasmatiques de la Plasma Ball Unit sont bien identifiés et fréquemment utilisés
as a basic environment for processing and further focusing on specific parts of the body of a human being or an animal. Furthermore, the created fields support heavily to connect with the soul of the people inside the unit and therefore gives a boost in processing for all people involved, therefore the unit can also be seen as a training unit for space technology. The way how to use the Plasma Ball Unit and protocols for specific cases can be developed in the medical teaching of the Keshe Foundation (to apply, write an email to doctors@keshefoundation.org).	comme une base pour un traitement ciblé sur des parties spécifiques du corps d'un être humain ou d'un animal. En outre, les champs créés permettent une connexion à l'âme des personnes qui se trouvent à l'intérieur de l'unité et renforcent donc toutes les personnes présentes. La PBU peut être également considérée comme une unité de formation à la space technology. L'utilisation de la PBU et les protocoles pour des cas spécifiques peuvent être développés dans l'enseignement médical de la Keshe Foundation (pour postuler, envoyez un courriel à doctors@keshefoundation.org).
The Plasma Ball Unit is CE certified Medical Type I and is delivered as a kit. Most of the components are pre-assembled; assembling the unit takes maximum 15 minutes. INTRODUCTION

The Keshe Foundation Poland was informally established by Paweł and Marcin in December/January of 2015/2016. Since then the team has grown and now includes three teachers and tens of private students. Based on the momentum of publicity about Ing. Mehran Keshe's teachings and the simultaneous release of the Magrav blueprint for humanity, a group of people looking for confirmation of the veracity of their thinking and implementation of this device, very quickly gathered together. Initially, the exchange of views and presentation of the different implementations and understandings of the blueprint started amongst the group of 15 Knowledge Seekers via the Google Hangouts platform. After some time, thanks to the Keshe Foundation, we discovered the Zoom platform, which has broadened our presentation and educational abilities. At the same time, we started inviting some wonderful people from the circles of the Keshe Foundation, who in a beautiful and open way presented their understanding and showed that this knowledge is known and recognized internationally amongst different cultures.

Thanks to the support of many Knowledge Seekers, we understood that behind the Magrav unit sits a very deep understanding of the creation and transmutation of fields, and hence the first Magravs from leaves and roots were assembled. This understanding and the open sharing of knowledge by the Foundation highlighted the lack and the need for translations, so that the physicality of those who do not understand English could enjoy the beauty of such wonderful knowledge. As a result, we started to work on forming a group of translators and correctors. This group of 6-10 people continues to work work with great dedication and concern for others, by regularly releasing translations and transcriptions which support our weekly teachings, website and other areas. Thanks to the openness of the Foundation and its support on many levels, we reached a point where we found strength and courage to become a part of its educational team. This was somehow a result of the open invitation issued by the KF to all those who wanted to become a part of it, during one of the Knowledge Seekers Workshops. Since then a beautiful journey of knowledge exchange started via the Zoom platform provided by the KF, for which we are extremely grateful.

The team is focused on a number of initiatives to facilitate free sharing of the Plasma Science, some of which are presented in this article. At the core sit both online and face-to-face teachings backed up by online presence through our website and Facebook pages. Our mission is to spread the knowledge unconditionally and help others gain easy access to the original educational materials through the effort of **translations,** video transcriptions and provision of a website (**http://kfssi.edu.pl**). We are very pleased and honoured to be part of the Keshe Foundation family in the great mission of bringing Peace to this planet and taking man into the space.

TEACHINGS

The team of students, teachers and other Knowledge Seekers meets twice a week, on Thursdays and Sundays at 21:00 CET, in the public teachings (zoom id: 756-427-144). Teachings typically last 2 hours and discussions are mostly based around the translation of fragments of the recent Knowledge Seekers Workshops by Mr Keshe. Recordings of these sessions are typically available on the following day through the official **KFSSI channel** on Youtube under the **Public Teachings in Polish – Nauki publiczne w języku polskim** playlist. Translated material that is a subject of each teaching, is also made available through the **KFSSI Polska** Youtube channel which contains a number of playlists.

A BEAUTIFUL JOURNEY OF KNOWLEDGE EXCHANGE
by the teachers of the Keshe Foundation Poland

INTRODUCTION

The Keshe Foundation Poland was informally established by Paweł and Marcin in December/January of 2015/2016. Since then the team has grown and now includes three teachers and tens of private students. Based on the momentum of publicity about Ing. Mehran Keshe's teachings and the simultaneous release of the Magrav blueprint for humanity, a group of people looking for confirmation of the veracity of their thinking and implementation of this device, very quickly gathered together. Initially, the exchange of views and presentation of the different implementations and understandings of the blueprint started amongst the group of 15 Knowledge Seekers via the Google Hangouts platform. After some time, thanks to the Keshe Foundation, we discovered the Zoom platform, which has broadened our presentation and educational abilities. At the same time, we started inviting some wonderful people from the circles of the Keshe Foundation, who in a beautiful and open way presented their understanding and showed that this knowledge is known and recognized internationally amongst different cultures.

Thanks to the support of many Knowledge Seekers, we understood that behind the Magrav unit sits a very deep understanding of the creation and transmutation of fields, and hence the first Magravs from leaves and roots were assembled. This understanding and the open sharing of knowledge by the Foundation highlighted the lack and the need for translations, so that the physicality of those who do not understand English could enjoy the beauty of such wonderful knowledge. As a result, we started to work on forming a group of translators and correctors. This group of 6-10 people continues to work work with great dedication and concern for others, by regularly releasing translations and transcriptions which support our weekly teachings, website and other areas. Thanks to the openness of the Foundation and its support on many levels, we reached a point where we found strength and courage to become a part of its educational team. This was somehow a result of the open invitation issued by the KF to all those who wanted to become a part of it, during one of the Knowledge Seekers Workshops. Since then a beautiful journey of knowledge exchange started via the Zoom platform provided by the KF, for which we are extremely grateful.

The team is focused on a number of initiatives to facilitate free sharing of the Plasma Science, some of which are presented in this article. At the core sit both online and face-to-face teachings backed up by online presence through our website and Facebook pages. Our mission is to spread the knowledge unconditionally and help others gain easy access to the original educational materials through the effort of translations, video transcriptions and provision of a website (http://kfssi.edu.pl). We are very pleased and honoured to be part of the Keshe Foundation family in the great mission of bringing Peace to this planet and taking man into the space.

TEACHINGS

The team of students, teachers and other Knowledge Seekers meets twice a week, on Thursdays and Sundays at 21:00 CET, in the public teachings (zoom id: 756-427-144). Teachings typically last 2 hours and discussions are mostly based around the translation of fragments of the recent Knowledge Seekers Workshops by Mr Keshe. Recordings of these sessions are typically available on the following day through the official KFSSI channel on Youtube under the Public Teachings in Polish – Nauki publiczne w języku polskim playlist. Translated material that is a subject of each teaching, is also made available through the KFSSI Polska Youtube channel which contains a number of playlists.

A BEAUTIFUL JOURNEY OF KNOWLEDGE EXCHANGE
by the teachers of the Keshe Foundation Poland

</td>
<td>

UN MAGNIFIQUE VOYAGE D'ÉCHANGE DE CONNAISSANCES
par les enseignants de la Keshe Foundation Pologne

</td>
</tr>
<tr>
<td>

Introduction
The Keshe Foundation Poland was informally established by Paweł and Marcin in December/January of 2015/2016. Since then the team has grown and now includes three teachers and tens of private students. Based on the momentum of publicity about Ing. Mehran Keshe's teachings and the simultaneous release of the Magrav blueprint for humanity, a group of people looking for confirmation of the veracity of their thinking and implementation of this device, very quickly gathered together. Initially, the exchange of views and presentation of the different implementations and understandings of the blueprint started amongst the group of 15 Knowledge Seekers via the Google Hangouts

<td>

Introduction
La Keshe Foundation Pologne a été créée de manière informelle par Paweł et Marcin en Décembre 2015/Janvier 2016. Depuis lors, l'équipe s'est agrandie et comprend maintenant trois professeurs et des dizaines d'étudiants privés. Basé sur l'élan de notoriété de l'Ing. Mehran Keshe et la publication simultanée du plan du Magrav blueprint pour l'humanité, un groupe de personnes à la recherche d'une confirmation de la véracité de leur pensée et de la mise en œuvre de ce dispositif, se sont très rapidement réunis. Au début, l'échange de visions et la présentation des différentes mises en œuvre et compréhensions du blueprint a commencé parmi un groupe de 15 chercheurs de

platform. After some time, thanks to the Keshe Foundation, we discovered the Zoom platform, which has broadened our presentation and educational abilities. At the same time, we started inviting some wonderful people from the circles of the Keshe Foundation, who in a beautiful and open way presented their understanding and showed that this knowledge is known and recognized internationally amongst different cultures.	connaissances via Google Hangouts. Ensuite, la Keshe Foundation s'est lancée sur la plate-forme Zoom, ce qui a élargi nos capacités de présentation et d'éducation. En même temps, nous avons commencé à inviter des personnes merveilleuses des cercles de la Keshe Foundation, qui, d'une manière belle et ouverte, nous ont présenté leur compréhension et montré que ce savoir est connu et reconnu internationalement parmi les différentes cultures.
Thanks to the support of many Knowledge Seekers, we understood that behind the Magrav unit sits a very deep understanding of the creation and transmutation of fields, and hence the first Magravs from leaves and roots were assembled. This understanding and the open sharing of knowledge by the Foundation highlighted the lack and the need for translations, so that the physicality of those who do not understand English could enjoy the beauty of such wonderful knowledge. As a result, we started to work on forming a group of translators and correctors. This group of 6-10 people continues to work with great dedication and concern for others, by regularly releasing translations and transcriptions which support our weekly teachings, website and other areas. Thanks to the openness of the Foundation and its support on many levels, we reached a point where we found strength and courage to become a part of its educational team. This was somehow a result of the open invitation issued by the KF to all those who wanted to become a part of it, during one of the Knowledge Seekers Workshops. Since then a beautiful journey of knowledge exchange started via the Zoom platform provided by the KF, for which we are extremely grateful.	Grâce au soutien de nombreux Knowledge Seekers, nous avons compris que derrière l'unité Magrav se trouve une compréhension très profonde de la création et de la transmutation des champs. Voilà comment les premiers Magravs, à partir de feuilles et de racines, ont été montés. Cette compréhension et le partage ouvert des connaissances ont mis en évidence le besoin de traductions. La physicalité des non-anglopnones pourrait accéder à la beauté de ce merveilleux savoir. Ainsi, nous avons commencé à travailler à la formation d'un groupe de traducteurs et de correcteurs (6 à 10 personnes), qui travaille avec beaucoup de dévouement et d'abnégation. Il publie régulièrement des traductions et des transcriptions qui complètent nos enseignements hebdomadaires, notre site web, etc. Grâce à l'ouverture de la Foundation et à son soutien à de nombreux niveaux, nous avons ainsi trouvé la force et le courage d'intégrer son équipe éducative. Un peu le résultat de l'invitation lancée par la KF durant un des Knowledge Seekers Workshop à tous ceux qui voulaient en faire partie. Depuis lors, un magnifique voyage d'échange de connaissances a commencé via le Zoom de la KF, ce dont nous sommes extrêmement reconnaissants.
The team is focused on a number of initiatives to facilitate free sharing of the Plasma Science, some of which are presented in this article. At the core sit both online and face-to-face teachings backed up by online presence through our website and Facebook pages. Les enseignements durent généralement 2 heures. Les discussions sont principalement basées sur la traduction de fragments des récents Knowledge Seekers Workshops par Mr Keshe. Les enregistrements de ces ateliers sont généralement disponibles le lendemain sur le KFSSI channel de Youtube sous Public Teachings in Polish – Nauki publiczne w języku polskim. Les traductions sont aussi disponibles sur la chaîne Youtube KFSSI Polska qui contient un certain nombre de liste de lecture.
Page 10 **LANGUAGE COMMUNITY**	**Page 10** **LA COMMUNAUTÉ LINGUISTIQUE**

KF PLASMA TIMES

Private teaching take place on Mondays, 21:00 CET on zoom id 949-559-976. In these sessions we follow the same style of teaching, by firstly presenting a subtitled part of a selected private teaching by Mr. Keshe and then discussing fragments of the teaching. Recordings of these meetings are available online to the registered students through the **Keshe Foundation education portal**.

Affiliated group of experienced Knowledge Seekers runs regular public meetings during which Knowledge Seekers provide testimonials, exchange ideas and experiences. If you struggle to understand some basic concepts or need practical advice on how to nano-coat various materials or produce certain GANSes or plasma devices, Technologia Plazmowa meets every Friday at 22:00 CET (zoom id: 933-933-9399).

Plasma Consultation sessions are also available on demand to the public - after sending an expression of interest to **technologiaplazmowakonsultacje@gmail.com**. These sessions run every Wednesday between 21:00-23:00 CET (zoom id: 971-575-7040).

Teachers of the Polish group also collaborate in the private and public teachings in English.

/ WORKSHOPS AND CONFERENCES

The first Polish conference on Keshe's Plasma Technology took place in April 2017 in Skaryszew, Poland. Attended by over 140 participants this event attracted substantial attention and was very well received. Organized in-line with the ethos of the KF family, the 3-day participation in the conference was fairly inexpensive (around 40 euros in total). Each participant received singing and round magnets, small amounts of CO_2, CuO and CH_3 GANSes and promotional materials (cup, pen, stickers) in their participant's pack. All income generated through this event (nearly 2000 euros) was transferred to the Keshe Foundation to support the development of the research centre in Ghana. During these 3 days Keshe Foundation students and teachers gave talks and presentations on various topics related to the Plasma Technology. Plasma coil units and other plasma devices were available free of charge for conference participants to use across all three days.

On the last day participants were presented with a freshly released, subtitled video of the **Cancer solution in exchange for peace**, which received a lot of interest. Some recordings from the conference are available online on the **KFSSI Polska** Youtube channel.

Public engagement activities in Poland continue in the form of face-to-face worskhops. To date, the team of accredited teachers successfully run two workshops - both took place in 2018 in Gdynia, Poland. We appreciate that for many people this technology remains a mystery as it is silenced by the national media. Therefore, it is crucial to reach out to people and teach them the very basics of the Plasma Science. Nano-coating, gans production and practical applications of this technology were at the core of both workshops. Detailed presentation of their programme took place in the 46th One Nation One Planet One Race for World Peace. All thought in the atmosphere of correct ethos, emphasizing the role of emotions and intentions in this technology. The family of Knowledge Seekers is growing faster than ever!

/ BLUEPRINT FOR PEACE

The blueprint for peace for humanity was a turning point for the whole of the humanity. During that month of everyday teachings we all went deeper in the field strength towards the direction of our Soul and the Soul of the planet Earth. A new understanding, huge amount of knowledge and a tremendous effort to unite the entire planet opened the gates of Peace. We felt that not a single Polish speaking person should miss out on this opportunity and throughout the month of July, on daily basis without missing a single day, the team of Knowledge Seekers presented summaries of AM and PM teachings and subtitled portions of their recordings. The blueprint month finished with the **signing of the World Peace Treaty**. Countless number of invitations for this event were sent to the Polish president and prime minister. Soon after the blueprint was over, the Earth Council released **The Constitution of the Blue Planet Earth** now available in many different languages, including Polish. This month we celebrate the first anniversary of the signing of the World Peace Treaty by all the languages of the Earth. The collective's first steps to reach out to the Universal Community were made exactly 1 year ago and we can observe huge changes around us. The amount of violence and new conflicts dropped down significantly and many world leaders realized the power of this technology and the benefits of Peace.

/ SOCIAL MEDIA

KF Poland is present on social media mainly through the Facebook platform. The official KF page for this language is called the **Keshe Fundacja Polska (KF Polish official)**. By joining this group you will get the latest updates in the areas of teachings, workshops and youtube recordings, as well the ability to participate in discussions and to add to the knowledge.

/ HEALTH

The health team in Poland now has one medical doctor and one naturopath with further doctors' applications pending. Doctors who need supplies of various GANSes, but lack time or expertise to produce them, are supplied by the students. One of the private students has even donated a **Plasma Coil Unit** for the doctor to use in their practise. Medical research continues in different directions, outcomes of which will soon be presented in the **KF Plasma Scientific Journal**.

KF PLASMA TIMES

AGRICULTURE

Last year was plentiful in many events related to plasma technology, which positioned us and focused our efforts on several new strands of work. Nevertheless, the perspective of using plasma technology in agriculture was not pushed aside completely. In 2017, many people throughout the country spilled plasma water into water tanks, rivers, ponds and lakes, which certainly influenced not only the nearby crops but also the entire environment. There were also some interesting experiments and observations, the first of which is a cherry tree which, due to the late frosts, completely dropped its flowers. After spraying the plant and thorough watering of its root system with CO_2 plasma water, the tree blossomed again and consequently gave fruits. Pictures of this tree are available here. (**https://www.facebook.com/Kfssi/photos/a.990481504406575.1073741828.990399577748101/1315575078563881/?type=3&theater**)

At the same time, due to frost, damage was made to a blackcurrant plantation. The owner of the field stated that due to its age the whole plantation was suitable for liquidation. Containers with plasma water were dug into the ground in the field. However, this action was taken too late for the currant to bloom again. As it turned out, at the end of the season the owner of the plantation stated that the plants are strong and healthy enough to keep growing for several consecutive seasons. In 2018, the currant bloomed beautifully and gave a large yield. However, due to the low cost of fruit purchase and low profitability of the harvest, the fruits were not picked up. Currently, farmers strike in Poland due to the low profitability of soft fruit harvest.

Another example was the cultivation of maize on one of the fields in the Lublin region. One farmer dug 7 bottles of liquid plasma into one of his fields (6 in a circle and one centrally in the middle) on a growing corn plantation. After a few weeks, the corn inside the circle was about 20 cm lower than the remaining part of the plantation, but by the time of harvest it levelled in height to the rest of the sown maize. Interestingly, just before the harvest, a herd of wild boars entered the field trampling and eating all the crops. However, inside the area where the bottles with liquid plasma were dug in and about 10 m around it, the corn remained untouched. Does this sound familiar? This is somewhat reminiscent of the plasma bubble around Tom Salas' garden in Dominican Republic.

Arrangements are made for next year to use the plasma technology for the cultivation of hemp plants. A report from this initiative will be made next year.

EMOTIONS

A few months after the Magrav blueprint, in a small but open circle, we came to an understanding, that emotions and its functioning is an amazing educational and creative tool, so we started to work with it, carrying out a number of interesting experiments. Our openness in **sharing** with each other without hiding anything, every element of the new understanding, led us to the position in which we started to work with non-tangible reactors. This allowed us to touch on - in the way not yet understood by us entirely - new, different capabilities **that** are fully explained in a scientific and logical way through the work of magnetic plasma fields. This in turn allowed us to observe the next stages of the development of the structure of emotions and building confidence in ourselves, by ourselves - what we later called the **banking** process. Thanks to this process of increasing the plasmatic current and the simultaneous development of knowledge by the greatest teacher of all time - Mr Keshe; we started to work with others, educating each other both in physicality as well as in the dimension of the fields, **heading** more towards the understanding of the working of the fields. This experiment showed us that knowledge/understanding is a field strength of emotions and in its propagation factors such as time and space do not matter. Thanks to this **understanding**, in May this year, we decided to start a new project, which we called the School of Emotions. In this school, we learn from each other different relations between the fields by discovering and differentiating between the work of different non-tangible reactors. This is **done** non-verbally through the system of non-tangible, spinning star formations. This project aims to recognize and gain a greater understanding of the creation by working through the dimensions of our miraculous bodies and its dimension of the magnetic field strength. The project is **completely** free, open to everyone with meetings taking place biweekly, on Tuesdays and Fridays at 22:00 CET on the Zoom platform (zoom id: 834-224-6046).

FUTURE INITIATIVES

The unconditional serving continues in the aforementioned areas and flowers in other, such as the **Keshe Foundation Wiki**. The translation of the wiki into Polish started recently and volunteers to help in this and other efforts are always more than welcomed. Whether you are **familiar** with the English language or not we could use any help in many different areas, including but not limited to graphics design, proofreading, social medial posting, etc. You can reach us either through the Universal Council representative's email **uc.polish@theuniversalcouncil.org**.

Further workshops and conferences are also being planned and organized, with the next workshop taking place on **Saturday 8th of September** - venue to be decided.

KF PLASMA TIMES

AGRICULTURE

Last year was plentiful in many events related to plasma technology, which positioned us and focused our efforts on several new strands of work. Nevertheless, the perspective of using plasma technology in agriculture was not pushed aside completely. In 2017, many people throughout the country spilled plasma water into water tanks, rivers, ponds and lakes, which certainly influenced not only the nearby crops but also the entire environment. There were also some interesting experiments and observations, the first of which is a cherry tree which, due to the late frosts, completely dropped its flowers. After spraying the plant and thorough watering of its root system with CO_2 plasma water, the tree blossomed again and consequently gave fruits. Pictures of this tree are available here. (https://www.facebook.com/Kfssi/photos/a.990481504406575.1073741828.990399577748101/1315575078563881/?type=3&theater)

At the same time, due to frost, damage was made to a blackcurrant plantation. The owner of the field stated that due to its age the whole plantation was suitable for liquidation. Containers with plasma water were dug into the ground in the field. However, this action was taken too late for the currant to bloom again. As it turned out, at the end of the season the owner of the plantation stated that the plants are strong and healthy enough to keep growing for several consecutive seasons. In 2018, the currant bloomed beautifully and gave a large yield. However, due to the low cost of fruit purchase and low profitability of the harvest, the fruits were not picked up. Currently, farmers strike in Poland due to the low profitability of soft fruit harvest.

Another example was the cultivation of maize on one of the fields in the Lublin region. One farmer dug 7 bottles of liquid plasma into one of his fields (6 in a circle and one centrally in the middle) on a growing corn plantation. After a few weeks, the corn inside the circle was about 20 cm lower than the remaining part of the plantation, but by the time of harvest it levelled in height to the rest of the sown maize. Interestingly, just before the harvest, a herd of wild boars entered the field trampling and eating all the crops. However, inside the area where the bottles with liquid plasma were dug in and about 10 m around it, the corn remained untouched. Does this sound familiar? This is somewhat reminiscent of the plasma bubble around Tom Salas' garden in Dominican Republic.

Arrangements are made for next year to use the plasma technology for the cultivation of hemp plants. A report from this initiative will be made next year.

EMOTIONS

A few months after the Magrav blueprint, in a small but open circle, we came to an understanding, that emotions and its functioning is an amazing educational and creative tool, so we started to work with it, carrying out a number of interesting experiments. Our openness in sharing with each other without hiding anything, every element of the new understanding, led us to the position in which we started to work with non-tangible reactors. This allowed us to touch on - in the way not yet understood by us entirely - new, different capabilities that are fully explained in a scientific and logical way through the work of magnetic plasma fields. This in turn allowed us to observe the next stages of the development of the structure of emotions and building confidence in ourselves, by ourselves - what we later called the banking process. Thanks to this process of increasing the plasmatic current and the simultaneous development of knowledge by the greatest teacher of all time - Mr Keshe; we started to work with others, educating each other both in physicality as well as in the dimension of the fields, heading more towards the understanding of the working of the fields. Nevertheless, the perspective of using plasma technology in agriculture was not pushed aside completely. In 2017, many people throughout the country spilled plasma water into water tanks, rivers, ponds and lakes, which certainly influenced not only the nearby crops but also the entire environment. There were also some interesting experiments and observations, the first of which is a cherry tree which, due to the late frosts, completely dropped its flowers. After spraying the plant and thorough watering of its root system with CO2 plasma water, the tree blossomed again and consequently gave fruits. Pictures of this tree are available here.	**Agriculture** 2017 a été riche en événements liés à la plasma technology. Cela nous a permis de nous positionner et de concentrer nos efforts sur de nouveaux axes de travail. Ainsi, l'utilisation de la plasma technology dans l'agriculture a également été abordée. De nombreuses personnes dans tout le pays ont déversé de la plasma water dans des réservoirs d'eau, des rivières, des étangs et des lacs, ce qui a certainement eu une influence sur les cultures voisines et sur tout l'environnement. Des expériences et des observations intéressantes ont également eu lieu : la première est un cerisier qui, à cause des gelées tardives, a complètement défleuri. Après pulvérisation et arrosage en profondeur de ses racines (CO2 plasma water), l'arbre a refleuri et a donné des fruits. Photos disponibles ici.
At the same time, due to frost, damage was made to a blackcurrant plantation. The owner of the	Encore à cause du gel, une plantation de cassis a été endommagée. Le propriétaire du champ,

field stated that due to its age the whole plantation was suitable for liquidation. Containers with plasma water were dug into the ground in the field. However, this action was taken too late for the currant to bloom again. As it turned out, at the end of the season the owner of the plantation stated that the plants are strong and healthy enough to keep growing for several consecutive seasons. In 2018, the currant bloomed beautifully and gave a large yield. However, due to the low cost of fruit purchase and low profitability of the harvest, the fruits were not picked up. Currently, farmers strike in Poland due to the low profitability of soft fruit harvest.	étant trop âgé, souhaitait vendre sa plantation. Des conteneurs remplis de plasma water ont été enterrés dans la plantation, cependant trop tard pour que le cassis puisse refleurir. Il s'est avéré qu'à la fin de la saison, le propriétaire de la plantation a déclaré que les plantes étaient suffisamment fortes et saines pour continuer à pousser pendant plusieurs saisons consécutives. En 2018, le cassis a connu une belle floraison et a donné un rendement important. Mais, en raison du faible coût d'achat des fruits et de la faible rentabilité de la récolte, les fruits n'ont pas été ramassés. Actuellement, les agriculteurs font grève en Pologne en raison de la faible rentabilité de la récolte des baies.
Another example was the cultivation of maize on one of the fields in the Lublin region. One farmer dug 7 bottles of liquid plasma into one of his fields (6 in a circle and one centrally in the middle) on a growing corn plantation. After a few weeks, the corn inside the circle was about 20 cm lower than the remaining part of the plantation, but by the time of harvest it levelled in height to the rest of the sown maize. Interestingly, just before the harvest, a herd of wild boars entered the field trampling and eating all the crops. However, inside the area where the bottles with liquid plasma were dug in and about 10 m around it, the corn remained untouched. Does this sound familiar? This is somewhat reminiscent of the plasma bubble around Tom Salas' garden in Dominican Republic.	Un autre exemple est une culture de maïs dans l'un des champs de la région de Lublin. Un agriculteur a enterré 7 bouteilles de liquid plasma dans un de ses champs (6 en cercle et 1 au centre) sur une plantation de maïs. Après quelques semaines, le maïs à l'intérieur du cercle était environ 20 cm plus bas que le reste de la plantation. Au moment de la récolte, sa hauteur s'était stabilisée par rapport au reste du maïs semé. Fait notable : juste avant la récolte, un troupeau de sangliers est entré dans le champ en piétinant et en mangeant toute la récolte, hormis dans la zone où les bouteilles de liquid plasma étaient enterrées et à environ 10 m autour de celle-ci. Cela vous semble familier ? Ceci rappelle un peu la bulle de plasma qui entourait le jardin de Tom Salas en République Dominicaine.
Arrangements are made for next year to use the plasma technology for the cultivation of hemp plants. A report from this initiative will be made next year.	Des accords ont été passés sur l'utilisation de la plasma technology pour l'année prochaine sur des plants de chanvre. Un rapport sur cette initiative sera établi l'année prochaine.

The project is completely free, open to everyone with meetings taking place biweekly, on Tuesdays and Fridays at 22:00 CET on the Zoom platform (zoom id: 834-224-6046).	intangibles. Cela nous a permis d'aborder - d'une manière encore relativement incompréhensible - de nouvelles et différentes capacités entièrement expliquées de manière scientifique et logique par l'étude des champs magnétiques plasma. Nous avons pu observer les étapes suivantes du développement de la structure des émotions et de la construction de la confiance en soi, par soi-même - ce que nous avons appelé plus tard le processus de capitalisation. Grâce à ce processus d'augmentation du courant plasmatique et au développement simultané des connaissances par le plus grand professeur de tous les temps - Mehran T. Keshe ; nous avons commencé à travailler avec d'autres, en nous éduquant mutuellement tant sur le plan physique que sur celui de la dimension des champs et en visant la compréhension de leur fonctionnement. Cette expérience nous a montré que la connaissance/compréhension est un champ de force des émotions et que le temps et l'espace n'ont plus d'importance. De là, en Mai, un nouveau projet est né, **l'École des émotions**. Nous apprenons les uns des autres les différentes relations entre les champs en découvrant et en différenciant le travail de différents réacteurs intangibles. Cela se fait de manière non verbale via le star formation reactor. Ce projet vise à reconnaître et à mieux comprendre la création en travaillant sur les dimensions de tous nos corps et de leurs dimensions dans l'intensité du champ magnétique. Le projet est entièrement gratuit et ouvert à tous. Réunions deux fois par semaine, les Mardis et Vendredis à 22:00 CET sur la plate-forme Zoom (id zoom : 834-224-6046).

Gravitational Magnetic Battery	**La Batterie Magnétique Gravitationnel**
OBJECTIVE: Gravitational Magnetic Battery, made by D. I., fifth grade schoolboy at I.D, Sirbu of Petrila, Hunedoara county, Romania. Presented at the Minitehnicus County Contest, organized at the Children's Club in Petrosani on 9 June 2018.	OBJECTIF : Batterie Magnétique Gravitationnel, fabriquée par D. I., élève de CM2 à I.D., Sirbu de Petrila, comté de Hunedoara, Roumanie. Présenté au concours Minitehnicus, organisé au Club des enfants de Petrosani le 9 Juin 2018.
METHOD: Method: Copper wire 2,5 mm nanocoated with flame 4 times. GANS used: 10 ml GANS mix - 40% CH3, 18% CO2, 18% ZnO, 18% CuO.	MÉTHODOLOGIE : Fil de cuivre 2,5 mm nano-coaté 4 fois à la flamme. GANS utilisés : Mélange de 10 ml de GANS - 40% CH3, 18% CO2, 18% ZnO, 18% CuO.
PREPARATION: Classic GANS made with led connection and nano	PRÉPARATION : GANS de base réalisés avec led. Bobines nano à la

coils covered by the flame method and 10% salts.	flamme et solution saline à 10 %
SETUP: We used a 9 cm nanocoated copper wire that was rolled over a paper towel that had a mix of GANS. I wrapped the paper napkin with an aluminum foil in the kitchen of 28 cm long and the width of 7, to which I bent 1 cm (from the end). Aluminum overwrap was 9 turns in anti-clockwise direction with 2 cm zinc wire springs.	SETUP : Nous avons utilisé un fil de cuivre nano-coaté de 9 cm, enroulé sur un rouleau d'essuie-tout contenant le mélange de GANS. Nous avons enveloppé la serviette en papier imprégné du mélange dans une feuille d'aluminium de 28 cms par 7 cms, plié sur 1 cm (à partir du bout). Le suremballage en aluminium était de 9 tours dans le sens inverse des aiguilles d'une montre avec des ressorts en fil de zinc de 2 cm.
APPLICATION: This battery was tested at the Minitehnicus contest in date 9 June 2018 in Petrosani city, Romania.	APPLICATION : Batterie testée au concours Minitehnicus de Petrosani city le 9 Juin 2018 (Roumanie).
OBSERVATIONS: After this plasma battery was developed, a procedure to improve the result was found by replacing the paper briefcase with cotton disks used for women's cleanser.	OBSERVATIONS : Après la mise au point de cette batterie à plasma, une amélioration a été trouvée en remplaçant la serviette en papier par des disques de coton utilisés pour la toilette féminine.
RESULTS: The Minitehnicus contest measured the battery with a multimeter, and the registered value was 0.64 Volti. The responsible student received the diploma of the 1st place.	RÉSULTATS : Le jury Minitehnicus a pris la tension de la batterie au multi-mètre et a obtenu la valeur de 0,64 volt. L'élève a reçu la première place pour cette réalisation.

ALS - A DEATH WISH THAT COMES TRUE

This paper was written and published by Mehran Tavakoli Keshe, founder of the Keshe Foundation, on 25.9.2013.

[…] With the release of this paper Stichting the Keshe Foundation for the first time in its history opens the doors of its research to the public for a glimpse into one of its most closely guarded research programs. […]

We have developed the health section of our spaceship program because we believe the spacecraft of the future will not be able to carry all the medicines and doctors of every discipline required to cover all aspects of the health needs of people in long-haul deep space travels. In order to meet every eventual medical need there would be more medicine than food and more doctors than passengers on board these craft.

An insight into the principles by which the Keshe Foundation designs and operates its body resetting systems

In our work we consider the plasmatic structure of the elements and the interaction of the Magnetical and gravitational fields of these elements in the human body. We consider not only the physical method of connection and communication between different parts of the body, but we look at the invisible connection and interactions of magnetic fields and gravitational fields of the matters of the elements or organs in the body relative to each other. This invisible but real interaction of different parts of the body is one reason why the world of medicine has such a hard time at present curing most ailments.

We consider the human body to be like a galaxy in the universe, with all its physical entities and the hidden and invisible interactions and connections of its magnetic and gravitational fields (Magravs) forces. In a galaxy there are visible stars and planets and at the same time these have invisible Magravs connections between all their parts and with each other. […]

New fundamental criteria used in application to health […]

From our research we can with confidence state that amyotrophic lateral sclerosis is a reversible condition, if it is discovered at the right time and handled in the right way by a competent team of physicians. In view of our development of plasma technology and its applications, amyotrophic lateral sclerosis should no longer be a death sentence handed out by

This invisible but real interaction of different parts of the body is one reason why the world of medicine has such a hard time at present curing most ailments.	**Un aperçu des principes selon lesquels la Keshe Foundation conçoit et utilise ses systèmes de reconstitution du corps** Dans notre travail, nous abordons la structure plasmatique des éléments et l'interaction des champs magnétiques et gravitationnels de ces éléments dans le corps. En plus de considérer la méthode physique de connexion et de communication entre les différentes parties du corps, nous examinons la connexion et les interactions invisibles des champs MaGrav de la matière des éléments ou des organes les uns par rapport aux autres. Cette interaction invisible mais réelle dans le corps est l'une des raisons qui fait que le monde de la médecine a tant de mal à guérir aujourd'hui bien des maladies.
We consider the human body to be like a galaxy in the universe, with all its physical entities and the hidden and invisible interactions and connections of its magnetic and gravitational fields (Magravs) forces. In a galaxy there are visible stars and planets and at the same time these have invisible Magravs connections between all their parts and with each other. […]	[…] Nous considérons le corps humain comme une galaxie dans l'univers, avec toutes ses entités physiques et les interactions et connexions cachées et invisibles de ses forces de champs magnétiques et gravitationnels (Magravs). Dans une galaxie, il y a des étoiles et des planètes visibles et, en même temps, elles ont des connexions Magrav invisibles entre toutes leurs parties et les unes avec les autres.
New fundamental criteria used in application to health […] From our research we can with confidence state that amyotrophic lateral sclerosis is a reversible condition, if it is discovered at the right time and handled in the right way by a competent team of physicians. In view of our development of plasma technology and its applications, amyotrophic lateral sclerosis should no longer be a death sentence handed out by	**Nouveaux critères fondamentaux appliqués à la santé** […] D'après nos recherches, nous pouvons affirmer avec certitude que la sclérose latérale amyotrophique est une maladie réversible, si elle est découverte à temps et traitée correctement par une équipe de médecins compétents. Compte tenu de notre développement de la plasma technology et de ses applications, la sclérose latérale amyotrophique ne devrait plus être une condamnation à mort prononcée par les

doctors, who tell their patients in the same breath that there is nothing that can be done to save their life as the present world of science has no cure for this killing disease. The present medical world cannot explain the origin of amyotrophic lateral sclerosis or what triggers this process in the human body. […]

We have been striving to understand why the body puts itself through this horrendous process of amyotrophic lateral sclerosis that brings about its death. We see this as one of the illnesses most likely to occur in space when people are away from home and unknowingly can trigger such a process through depression or loneliness during long periods of being away from loved ones.

For the process to start, it requires two psychological trigger points during the life of the patient. One such event may take place in the early years or in the teenager phase and then for the illness to show itself outwardly, a second trigger point is needed. This can take place in the early twenties or in later years, causing the recurrence of the same feeling as in the first trigger point. […]

The point that has not been understood up to now is that most carbons are of diamond structure and the information received by the carbon through a given channel for a matter of a microsecond changes the characteristic of the carbon structure of the amino acid to given resistor strength level or to a given carbon structure of graphite atomic form as the carbon needs to be for a given current level of the information received from the brain for given retraction or reflex. In This process causes the potassium of the electro-motoric junction valve to be changed into insulating mode or disconnection mode, keeping the insulator crystal structure. […]

In the case of amyotrophic lateral sclerosis for example in the electro-motoric junction of the fibres, both the lines of the electric and the emotional fields operate simultaneously, with the potassium functioning to contract the fibre while the sodium process retracts or opens the fibre, which needs the lesser force. In the motoric operation, the potassium releases stronger fields and so it commands a stronger and longer contraction, as when a man needs to hold onto a bar to save himself from falling, while to open the same fingers the muscles use partly the reflex and partly a small amount of energy to allow the fibre to relax, which is done by the sodium magnetic field release. […]

Amyotrophic lateral sclerosis is not the work of one doctor; it needs a good dedicated team of physicians, psychologists, nutritionist, kinesiologist and neuro-tissue specialist to be there in every stage of development of the process and progress with the patient. Reversing amyotrophic lateral sclerosis and multiple sclerosis requires a caring and dedicated team if the case is to be successful in all aspects. […]

Wisdom gained

From our research into the cases of amyotrophic lateral sclerosis over the years and our understanding of how this process starts in the human body, we have called this illness the death wish that comes true. The affected person has unknowingly through two different but similar emotional situations in two different stages of their lives wished they were dead, and then when their wish comes true they have to complete their unconscious desire through such a traumatically slow and painful death. The patient himself triggers the physical death-code of his own body. […]

In all aspect of physics and the world of science man always has looked for the physical connection between the parts of the human body and has forgotten or never understood that as the human body is made of the plasma of protons and electrons and plasmas of all the atoms in the molecules of amino acid, these plasmas irradiate Magravs and receive Magravs of other cells, so they do not need a physical connection to interact and affect each other's performance.

Amyotrophic Lateral Sclerosis:

The process starts by the person wishing to be dead, and progresses through paralysis and silence to eventual death. Now with the new plasma technology developed by the Keshe Foundation and as we have seen with this case and a number of other cases around the world we can say with confidence:

"We have enough knowledge now to start to reverse the process of amyotrophic lateral sclerosis in the human body psychologically, and then the body will reverse the physical damage by itself.

Ensuite, un deuxième point de déclenchement est requis. Cela peut se produire au début de la vingtaine ou plus tard, entraînant la récurrence du même sentiment qu'au premier point de déclenchement. […]
The point that has not been understood up to now is that most carbons are of diamond structure and the information received by the carbon through a given channel for a matter of a microsecond changes the characteristic of the carbon structure of the amino acid to given resistor strength level or to a given carbon structure of graphite atomic form as the carbon needs to be for a given current level of the information received from the brain for given retraction or reflex. In This process causes the potassium of the electro-motoric junction valve to be changed into insulating mode or disconnection mode, keeping the insulator crystal structure. […]	Le point qui n'a pas été compris jusqu'à présent est que la plupart des carbones ont une structure de diamant et que l'information reçue par le carbone par un canal donné pendant une microseconde modifie la caractéristique de la structure carbonée de l'acide aminé à un niveau de résistance donné ou à une structure carbonée donnée de forme atomique de graphite comme le carbone doit l'être pour un niveau courant donné de l'information reçue du cerveau pour une rétraction ou un réflexe donné. Dans ce processus, le potassium de la valve de jonction électro-motrice est transformé en mode d'isolation ou de déconnexion, ce qui permet de conserver la structure cristalline de l'isolant. […]
In the case of amyotrophic lateral sclerosis for example in the electro-motoric junction of the fibres, both the lines of the electric and the emotional fields operate simultaneously, with the potassium functioning to contract the fibre while the sodium process retracts or opens the fibre, which needs the lesser force. In the motoric operation, the potassium releases stronger fields and so it commands a stronger and longer contraction, as when a man needs to hold onto a bar to save himself from falling, while to open the same fingers the muscles use partly the reflex and partly a small amount of energy to allow the fibre to relax, which is done by the sodium magnetic field release. […]	Pour la sclérose latérale amyotrophique, dans le cas de la jonction électro-motrice des fibres, les champs électrique et émotionnel fonctionnent simultanément. Le potassium contracte la fibre, le sodium rétracte ou ouvre la fibre, donc moins de force requise. Dans l'opération motrice, le potassium libère des champs plus forts et commande ainsi une contraction plus forte et plus longue, comme lorsqu'un homme doit s'accrocher à une barre pour éviter de tomber, alors que pour ouvrir les mêmes doigts, les muscles utilisent en partie le réflexe et en partie une petite quantité d'énergie pour permettre à la fibre de se détendre, ce qui se fait par la libération du champ magnétique du sodium. […]
Amyotrophic lateral sclerosis is not the work of one doctor; it needs a good dedicated team of physicians, psychologists, nutritionist, kinesiologist and neuro-tissue specialist to be there in every stage of development of the process and progress with the patient. Reversing amyotrophic lateral sclerosis and multiple sclerosis requires a caring and dedicated team if	La sclérose latérale amyotrophique doit être traitée par une équipe de médecins attentifs et dévoués ; psychologues, nutritionnistes, kinésiologues et spécialistes des neuro-tissus doivent être présents à chaque étape de la maladie.  **One of the ways M.T. Keshe delivers his teachings to the world is through the Knowledge Seekers Workshops. He speaks, without a script, directly from his Soul.** In doing so, he has fast tracked mankind's understanding of every aspect of his existence, many thousands of years ahead of what we thought we knew. Each spoken word in these workshops is a valuable gem, serving to collectively bring enlightenment to humanity, knowingly or unknowingly. It's Soul to Soul communication, at it's best. The most amazing thing, to me, about transcribing and editing these subtitles, is realising the deep connection that occurs between all Knowledge Seeker's involved in this process, on a Soul level. Transcribing subtitles is exactly like weaving a beautiful Persian Rug. Every single knot (sound bite) has to be carefully tied into the base fabric (the video recording). It takes time, patience and extraordinary concentration to keep every knot in correct colour and position. The end result is a priceless and beautiful creation for the pleasure of future generations. It's is a very fine art, indeed. No amount of value can be placed upon this work. It is priceless service. It comes from a deep desire within to help others understand the true beauty of giving enlightenment unconditionally, without desire for return. But the amazing reward, that comes as a result, is ever more enlightenment. Which is the only true reward in creation. Transcribing subtitles is not everyone's cup of tea, but I humbly recommend giving it a go, if you feel inclined. The more, the merrier. There are thousands of hours of recorded teachings still remaining to be worked on and only a relatively few dedicated Souls, at the moment, doing this important service. A special thanks to all the team who have welcomed me so warmly into their midst. And I'm here to stay. **Your Servant,** **Doug MacDonald** For thise willing to join the transcribers team, please e-mail us at: **subtitles@kfssi.org**  — WWW.KESHEFOUNDATION.ORG | 17	TESTIMONIALS THE PLEASURE OF TRANSCRIBING M.T. THE PLEASURE OF TRANSCRIBING MR. KESHE' S TEACHINGS By Doug MacDonald	LE PLAISIR DE TRANSCRIRE LES ENSEIGNEMENTS DE Mr KESHE Par Doug MacDonald
One of the ways Mr. Keshe delivers his teachings to the world is through the Knowledge Seekers Workshops. He speaks, without a script, directly from his Soul. In doing so, he has fast tracked mankind's understanding of every aspect of his existence, many thousands of years ahead of what we thought we knew. Each spoken word in these workshops is a valuable gem, serving to collectively bring enlightenment to humanity, knowingly or unknowingly. It's Soul to Soul communication, at its best.	L'un des moyens par lesquels Mr Keshe transmet ses enseignements au monde entier sont les Knowledge Seekers Workshops. Il parle, sans script, directement depuis son Âme. Il a ainsi permis à l'humanité de comprendre rapidement tous les aspects de son existence, bien en avance sur ce que nous pensions savoir. Chaque mot prononcé dans ces workshops est un précieux joyau, apportant collectivement l'illumination à l'humanité, consciemment ou non. C'est la communication d'Âme à Âme, à son apogée.
The most amazing thing, to me, about transcribing and editing these subtitles, is realizing the deep connection that occurs between all Knowledge Seeker's involved in this	La chose la plus étonnante, pour moi, dans la transcription et l'édition de ces sous-titres, est de réaliser la connexion profonde qui se produit entre tous les Knowledge Seekers impliqués dans

process, on a Soul level. Transcribing subtitles is exactly like weaving a beautiful Persian Rug. Every single knot (sound bite) has to be carefully tied into the base fabric (the video recording). It takes time, patience and extraordinary concentration to keep every knot in correct color and position. The end result is a priceless and beautiful creation for the pleasure of future generations. It's is a very fine art, indeed. No amount of value can be placed upon this work. It is priceless service.	ce processus, au niveau de l'Âme. Cette transcription est exactement comme tisser un beau Tapis Persan. Chaque nœud (l'extrait sonore) doit être soigneusement noué dans le tissu de base (l'enregistrement vidéo). Il faut du temps, de la patience et une concentration profonde pour chaque nœud soit de la bonne couleur, à la bonne position. Le résultat final est une belle et inestimable création pour les générations futures, un très bel ouvrage, en effet. Aucune valeur ne peut être attribuée à cette œuvre. C'est un service inestimable.
It comes from a deep desire within to help others understand the true beauty of giving enlightenment unconditionally, without desire for return. But the amazing reward, that comes as a result, is ever more enlightenment. Which is the only true reward in creation. Transcribing subtitles is not everyone's cup of tea, but I humbly recommend giving it a go, if you feel inclined. The more, the merrier. There are thousands of hours of recorded teachings still remaining to be worked on and only a relatively few dedicated Souls, at the moment, doing this important service. A special thanks to all the team who have welcomed me so warmly into their midst. And I'm here to stay.	Cet acte provient d'un profond désir d'aider les autres inconditionnellement à comprendre la véritable beauté de l'illumination, sans désir de retour. L'étonnante récompense qui en résulte est une illumination toujours plus grande, ce qui est la seule vraie récompense dans la création. La transcription des sous-titres n'est pas la tasse de thé de tout le monde, mais je vous recommande humblement d'essayer, si vous en avez envie. Plus on est de fou, plus on rit. Il reste encore des milliers d'heures d'enseignements à travailler et seules quelques Âmes dévouées, pour le moment, rendent ce service important. Un merci tout particulier à toute l'équipe qui m'a accueilli si chaleureusement en son sein. Et je suis ici pour y rester.
